

Kenneth Tafadzwa Zendera

Cloud & AI Governance Engineer · ISO 42001/27001/27701 Lead Auditor · Builder of ComplyAgent

Cape Town, South Africa · UTC+2 · kentaz23@hotmail.com · github.com/kentaz · linkedin.com/in/kenneth-tafadzwa-z-57954467

Summary

Six years across SOC engineering, cloud automation, and solutions architecture. Design, secure, and govern AWS infrastructure at the organisation level — landing zones, multi-account Terraform, security baselines. On the AI side: implement governance programmes aligned to the EU AI Act, NIST AI RMF, and ISO 42001, and build the tooling that proves compliance — currently shipping ComplyAgent, an open-source platform for EU AI Act audit-ready evidence collection.

Available for

- EU AI Act readiness assessments & control mapping for SaaS companies deploying AI in the EU
- Fractional CISO engagements (3–6 months) for Series A–C startups
- Cloud security architecture — AWS multi-account design, Terraform modules, baseline implementation
- AI governance programme design — ISO 42001 implementation, NIST AI RMF alignment, vendor risk assessment

Selected projects

complyagent (github.com/kentaz/complyagent)	EU AI Act audit-ready evidence collection for AI agent deployments — signed audit trails, OPA policy evaluation, PDF reports
ai-governance-toolkit (github.com/kentaz/ai-governance-toolkit)	Practitioner templates for EU AI Act risk classification, ISO 42001 audit, NIST AI RMF, incident response, vendor assessment
terraform-aws-security-baseline	Reusable module enabling Security Hub, GuardDuty, Config, CloudTrail+KMS, IAM Access Analyzer — ISO 27001 aligned
terraform-aws-bedrock-governance	Private VPC-endpointed Bedrock with Guardrails and CloudWatch monitoring — resources annotated to ISO 42001 controls
aws-cwagent-deployer	Self-healing CloudWatch Agent deployment via SSM State Manager with ASG-dimensioned alarms
aws-cost-auditor	Read-only cross-account cost reporting with MoM variance flagging and EC2 rightsizing — CloudShell-native

Experience

Cloud & AI Governance Engineer — MSP delivery (current)

Run cloud and AI governance delivery across two AWS Organizations. Design multi-account landing zones, author production Terraform, lead ISO 27001 / 42001 control implementation, and build the cross-account automation (Bash + Python) that keeps it all running.

Solutions Architect & Cloud Security Engineer — earlier roles

Designed and secured AWS workloads across SaaS and enterprise clients. Led migrations: GCP → AWS, RDS Blue/Green, IAM → IAM Identity Center, S3 + CloudFront OAC cutovers. Built incident response runbooks, CloudWatch alarm frameworks, and cost auditing tooling.

Certifications

- AWS Solutions Architect — Professional (2025)
- AWS Solutions Architect — Associate (2023)
- OCI 2025 Multicloud Architect Professional (2025)
- ISO/IEC 42001:2023 Lead Auditor — Mastermind (2025)
- ISO/IEC 27701:2025 Lead Auditor — Mastermind (2026)
- AWS Security — Specialty (2024)
- AWS SysOps Administrator — Associate (2023)
- ISC2 Certified in Cybersecurity (2024)
- ISO/IEC 27001:2022 Lead Auditor — Mastermind (2025)
- Fellow of Management Systems Auditing (2026)

Tech stack

Cloud: AWS (Control Tower, Organizations, IAM Identity Center, EC2, ECS, EKS, RDS, Lambda, CloudFront, Bedrock, VPC, Security Hub, GuardDuty, Config, CloudWatch), Azure, Oracle Cloud **IaC & CI/CD:** Terraform, CloudFormation, GitLab CI, GitHub Actions, TFSec, Checkov **Automation:** Bash, Python, AWS CLI, SSM **Containers:** Docker, Kubernetes (EKS) **Governance:** EU AI Act, NIST AI RMF, ISO 42001, ISO 27001, ISO 27701, CIS Benchmarks

Education

Bachelor of Technology, International Marketing — Chinhoyi University of Technology, Zimbabwe
